

# ArchitectHandoff.md

Version: 1.0.0 Date: 2025-12-23

## 1. Session Summary

We have successfully completed a major "Metacognitive Refactor" of the AI Agent's operating protocols.

- **Accomplished:** We rewrote `AIAgentWorkflow.md` to enforce a "Disconnected State Machine," separating the Analyst, Architect, and Builder roles to prevent context pollution. We also created a new `AIAgentUsersGuide.md` to explain this "Air Gap" workflow to the user.
- **Stopped:** We deliberately halted before beginning **Phase 3 (Text Report Standardization)** to avoid polluting the context window with the workflow discussions.

## 2. Immediate Priorities (The "Next Action")

The immediate goal for the next session is to execute **Phase 3**.

- **Target Files:** `contest_tools/reports/text_rate_sheet.py` and `contest_tools/reports/text_summary.py`.
- **Objective:** Refactor these reports to use the `prettytable` library (replacing manual string formatting) and align them with the `CLAREportsStyleGuide.md`.

## 3. Recommended Start-Up Procedure

1. **Save** this Handoff Kit (`ArchitectureRoadmap.md`, `ArchitectHandoff.md`) and the new `AIAgentUsersGuide.md`.
2. **Start a New Chat** (Analyst Mode).
3. **Upload:**
  - `project_bundle.txt` (Your standard source).
  - `AIAgentWorkflow.md` (The new v4.25.0+ version).
  - `ArchitectureRoadmap.md` (From this kit).
  - `ArchitectHandoff.md` (From this kit).
4. **Prompt:** "Review the Handoff Kit. Let's begin Phase 3: Text Report Standardization."
