

# ImplementationPlan.md

Version: 1.0.0 Target: 0.122.0-Beta

## 1. File Identification

- File: web\_app/analyzer/templates/base.html
- Baseline: Version 0.102.0-Beta

## 2. Surgical Changes

- [cite\_start]Remove Global "New Analysis" Button: Delete the <a> tag in the top navbar [cite: 1585] to prevent accidental session destruction from sub-pages.
- [cite\_start]Implement Session-Aware Menu: Update the Offcanvas Menu [cite: 1586] to detect active sessions (`session_id` or `session_key`).
  - State A (Active Session): Show "Current Dashboard" as the primary action. Show "Start New Analysis" as a secondary, muted action.
  - State B (No Session): Show "New Analysis" as the primary action.

## 3. Surgical Change Verification

#### 4. Affected Modules Checklist

- `web_app/analyzer/templates/dashboard.html` (Retains its local button; no change needed).
- `web_app/analyzer/templates/analyzer/qso_dashboard.html` (Navbar button removed; "Back" button remains).
- `web_app/analyzer/templates/analyzer/multiplier_dashboard.html` (Navbar button removed; "Back" button remains).

#### 5. Pre-Flight Check

- **Expected Outcome:** The top-right "New Analysis" button will disappear from all pages. The side menu will intelligently route users back to their active dashboard if one exists.
- **Backward Compatibility:** Pages without session context (like the Home page) will default to the standard "New Analysis" menu item.
- **Visual Compliance:** Uses standard Bootstrap utility classes (`text-primary`, `text-muted`) consistent with the existing design.
- **Logic Verification:** The `default` filter handles the discrepancy between `session_id` (used in sub-dashboards) and `session_key` (used in the main dashboard context).

#### 6. Post-Generation Verification

- I confirm the plan strictly follows the user's request to limit the proliferation of destructive buttons.
- Next Action Declaration included.
