Architect Handoff Notes

Date: 2025-12-12 **To:** Incoming Architect **Focus:** Phase 3 Validation & Phase 4 Initiation

Context

We have successfully transitioned to the **Hybrid Architecture**.

- **Current State:** The Web App (`web_app/`) is scaffolded, Dockerized, and operational.
- **Validation:** The "Pathfinder Run" (uploading logs to the web interface) has been verified.

The Immediate Task: Phase 4 (The Data Layer)

We must now build the mechanism to fetch logs from public sources (e.g., raw raw text files from URLs) to populate the slots without manual uploads.

Instructions for Next Session

1. **Verify Validation:** Ensure the Web App handles all report types correctly.
2. **Execute Phase 4:**
   - Implement `contest_tools/log_fetcher.py`.
   - Add "Fetch from URL" tabs to the Web UI.
